

1511S Series

Single Integrated Delayed Egress Locks

SDC's ExitCheck® delayed egress locks continue to be the premier delayed egress offering on the market. **The patented design revolutionized delayed egress** by incorporating an alternating verbal message, verbal countdown and alarm tone, plus a large digital countdown display and door release indicator to provide a clear warning for the safety of persons without prior knowledge of door operation, including the blind and hearing impaired. Designed to delay egress through perimeter exit doors for 15 or 30 seconds, alert security and personnel to unauthorized egress, and are compatible with access controls and patient wandering systems.

A choice of operation mode allows users to meet their local code compliance while meeting all national and regional building and fire life safety codes, including NFPA 101, Special Locking Arrangements. All SDC delayed egress locks release immediately in an emergency.

A variety of field selectable options allow for field selectable voice message and alarm tone, or alarm tone only; field selectable activation on door movement; exit device with switch kit; or pressure sense bars for non-latching doors; field selectable automatic or manual relock upon power up after emergency release or power loss; and a field selectable door prop alarm sounds when door is left open after the selected bypass time has elapsed.

The 1511S series incorporates all ExitCheck® features for single door applications with an integrated three position key switch for reset; manual power-up and bypass settings for convenience.

MODELS

1511S Single Delayed Egress Lock

STANDARD FEATURES

- Integrated delayed egress magnetic lock
- Interlocking quick mount assembly
- Visual countdown display indicator
- Alternating verbal message
- Verbal countdown and alarm tone
- Built-in activation trigger
- Adjustable door movement sensor
- Integrated three position keyswitch
- Wandering patient, patient and infant tracking system compatible
- Code compliant operation modes
- Auto-sensing dual voltage
- Voltage and current spike protection
- Field selectable security or safety message
- Field selectable activation trigger
- Field selectable automatic or manual reset
- Field selectable sustained or timed bypass
- Single or multi-door zone control and reset
- Remote reset
- Fire/emergency release
- Anti-tailgate

OPTIONAL FEATURES

- Low power consumption, energy saver
- Door position status (DPS)
- Bond alert status (BAS)
- Anti-tamper status (ATS)
- Alarm reset on REX programming
- Alternative language programming

APPLICATIONS

Typically used on exit doors, when unauthorized egress is initiated in the locked mode, SDC's ExitCheck® locks delay egress through the door for 15 or 30 seconds. Meanwhile, the person exiting must wait while personnel or security respond. The door unlocks after 15 seconds have elapsed, permitting egress. A signal from the fire life safety system will release the lock for uninhibited egress in an emergency. 30 second delay available where approved.

BUILT-IN ACTIVATION FOR LATCHING DOORS

The mechanical latch mechanism must be locked on the exterior and unlocked on the interior. From the inside, retracting the door latch and applying pressure causes limited door movement. The built-in activation trigger senses the door movement and initiates delayed egress operation. The adjustable sensor helps prevent false triggering.

EXTERNAL ACTIVATION FOR LATCHING DOORS*

Where preferred, activation may be accomplished by a latch monitoring strike or a switch installed in a standard latching exit device or lockset. A power transfer device is required for exit devices equipped with a trigger switch.

EXTERNAL ACTIVATION FOR NON-LATCHING DOORS*

The external activation trigger input must be used with doors without latch assemblies, such as latchless glass and herculite doors. Activation may be triggered by SDC's MSB550 or PSB560 series egress bars. A power transfer device is required. Pushing on a request-to-exit egress bar immediately activates the delayed egress operation.

AUTO POWER-UP

When selected, regardless of the means of deactivation, relocking of the ExitCheck® occurs when power is restored and/or the fire life safety panel is reset.

MANUAL POWER-UP

UBC, California Building Code (OSHPD) Compliant Reset

When selected, regardless of the means of deactivation, relocking of the ExitCheck® is by manual means only at the door. Only after power restoration and/or fire life safety panel reset, the door may be relocked by actuating the standard built-in key reset or optional wall mounted key switch, push switch or digital keypad located adjacent to the door.

* Separate door position switch recommended.

KEYLESS CONTROL

Although equipped with a standard built-in four function key switch for reset, manual power up, momentary bypass and sustained bypass functions, the SDC 920 wall mounted keypad provides the convenience of keyless operation for alarm reset, manual power-up, momentary bypass and sustained bypass functions..

AIRPORT & PUBLIC FACILITY SECURITY & SAFETY

Control pedestrian traffic in government, public and transportation facilities, including airport jetways and tarmacs.

LOSS PREVENTION

Provide theft protection of retail merchandise, technology and other valuables, such as art and museum artifacts.

ACCESS CONTROL

Access controls may be utilized for authorized egress, access and lock reset. Access from the exterior of latching doors requires an additional means of mechanical lock release, such as a mechanical key or electric strike.

WANDERING PATIENT AND INFANT PROTECTION

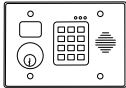

Restrict the egress of psychiatric and drug rehab patients or elderly patients in assisted living facilities, and restrict the movement of nursery infants for their own safety and security.

PATIENT & INFANT TRACKING SYSTEMS

The SDC ExitCheck® is compatible with patient tracking systems like those used for protection against infant abduction from hospital nurseries and for the protection of patients in long term care facilities who may be endangered if they leave their care facility without supervision.

DELAYED EGRESS SPEAKERS

Speakers connect directly to delayed egress locks for enhanced decibels onsite or remote voice instruction duplication. Speaker driver may be provided by others for extreme decibel requirements.

101-SP External 15 Watt Speaker

RETROFIT SWITCH KITS

SDC's 00500 series retrofit switch kits provide electromagnetic lock release, delayed egress activation, request-to-exit (REX), alarm shunt or alarm activation.

Switch kits are field installed in the inactive hinge pad of rim mount exit devices, mortise exit devices, concealed vertical rod exit devices and surface vertical rod exit devices.

COMPONENT CONSIDERATIONS

EGRESS DEVICES

[CLICK TO VIEW](#)

SDC egress devices are designed for the release of magnetic locks and the activation of delayed egress locks installed on non-latching doors. Request-to-exit push bars provide uninhibited egress through access-controlled openings equipped with magnetic locks, while eliminating the need for prior knowledge of egress operation and enabling egress with a single natural motion. Request-to-exit push bars also eliminate the need for wall mounted exit switches requiring prior knowledge to unlock the door.

EMERGENCY DOOR RELEASES

[CLICK TO VIEW](#)

SDC's line of emergency door releases (EDR's) are designed to provide a physical method of unlocking an electronic lock in the event of an emergency and may influence the approval of an electric locking system. EDR's are usually fitted to emergency exit doorways in higher security areas. Our EDR's can initiate the release of an individual door or all doors on the same circuit and provide an auxiliary contact remote monitoring, CCTV activation or alarm activation.

REMOTE CONTROL CONSOLES

[CLICK TO VIEW](#)

Recommended for access systems without computer management capability, SDC's remote control consoles provide a means of central supervision and control of single and multiple openings within a facility. Available in several configurations, the TCC and RCC consoles provide remote lock control, door status and lock status. The modular design permits configuration flexibility to meet the demands of different control and monitoring requirements.

POWER CONTROLLERS

[CLICK TO VIEW](#)

SDC access control power supplies have been developed specifically to support access controls and electric locking hardware. They are UL listed and provide filtered and regulated linear DC power, with optional control logic, component interface, alarm interface and battery back-up to meet the requirements of single and multiple access-controlled openings. The circuitry design is ideal for the inductive loads generated by access control hardware for high performance and longevity.

KEYPADS & READERS

[CLICK TO VIEW](#)

SDC has a variety of digital keypad and proximity card access control system equipment to meet any need. SDC's keypads and readers are engineered to provide real-world door control of a single opening up to 100 doors, such as indoor, outdoor and PC-based systems, while ensuring fire and life safety code compliance along with superior expandability and flexibility in authorization identification, authentication, access approval and accountability of entities through login credentials.

IP-BASED CONTROLLERS

[CLICK TO VIEW](#)

SDC's low power line of IP-based access control solutions eliminate long cable runs and multiple power supplies by allowing easy integration and connection to an access control system using ordinary ethernet cable in a PoE enabled network. We've ensured they work in low power PoE environments where energy efficiency, flexibility and green and sustainable requirements reach all the way to electronic hardware and locks for controlling door openings.
